

APEXNOVA BRANDING GUIDE

01. Identity

Apexnova is a digital infrastructure brand focused on server management, VPS hosting, and advanced web development. This guide defines the visual language of the "Vanguard Wing" system—a departure from corporate blue into high-energy technical aesthetics.

02. Core Color Palette

ELECTRIC LIME
#32CD32

OBSIDIAN
#1A1A1A

INDUSTRIAL GRAY
#E0E0E0

Implementation Logic: Electric Lime is the brand anchor. Obsidian serves as the primary dark environment background. Industrial Gray is the standardized light-mode replacement for white, providing a professional, non-reflective surface.

03. Typography & Rationale

Primary Font: Monospace (Courier New / Roboto Mono)
APEXNOVA: Bold, 2px Tracking
CLOUD: Regular, 6px Tracking

The choice of monospace typography reflects the brand's roots in Linux system administration and infrastructure-as-code. It signifies transparency, logic, and precision.

04. Geometric Standards

The Vanguard Wing: A three-tiered crystal shard. Back tier at 30% opacity, middle at 60%, and top at 100%. This creates a 3D depth effect in flat SVG format.

The Border: A 12pt bold stroke around the perimeter of all insignia. This represents the security and enclosure of the network.

05. Primary Insignia (Rectangular)

TERMINAL MODE (DEFAULT)

Standard use for websites, splash screens, and dark-themed dashboards.

BLUEPRINT MODE (LIGHT)

Standard use for documentation, PDF invoices, and light-mode software UI.

06. Square Systems (1:1 Icons)

Standardized for application icons, profile avatars, and favicons.
